

Application No.: 09/934031

Case No.: 56091US002

Amendments to the Claims:

Please amend claims 1, 31, and 37.

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. **(Currently Amended)** An article comprising:
a tape ~~capable of being comfortably adhered to human skin, wherein the tape comprises~~
comprising an adhesive side and a non-adhesive side, wherein the adhesive side is coated with a pressure-sensitive adhesive; and
a layer of retroreflective beads that are partially embedded in the non-adhesive side of the tape, wherein the layer of retroreflective beads is substantially held in place in the non-adhesive side of the tape without the use of an additional adhesive or a resin.
- 2-3. **(Cancelled)**
4. **(Original)** The article of claim 1, wherein the tape is medical tape having a foam backing.
5. **(Original)** The article of claim 1, wherein the tape is medical tape having a non-woven backing.
6. **(Original)** The article of claim 1, wherein the layer of retroreflective beads exhibits an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective brightness after being subjected to a number of abrasion cycles, wherein the final reflective brightness is greater than seventy percent of the initial reflective brightness when the number of abrasion cycles is approximately 750.

Application No.: 09/934031

Case No.: 56091US002

7. **(Previously Presented)** The article of claim 1, wherein the layer of retroreflective beads exhibits an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective brightness after being subjected to a number of abrasion cycles, wherein the final reflective brightness is greater than ninety percent of the initial reflective brightness when the number of abrasion cycles is approximately 750.

8. **(Previously Presented)** The article of claim 1, wherein the layer of retroreflective beads exhibits an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective brightness after being subjected to a number of abrasion cycles, wherein the final reflective brightness is greater than ninety percent of the initial reflective brightness when the number of abrasion cycles is greater than 5000.

9-14. **(Cancelled)**

15. **(Original)** A method comprising:
covering a non-adhesive side of a pressure-sensitive adhesive tape with retroreflective beads; and
applying heat and pressure to melt the retroreflective beads into the non-adhesive side of the pressure-sensitive adhesive tape.

16. **(Original)** The method of claim 15, wherein the retroreflective beads comprise glass beads coated with aluminum, wherein each glass bead is coated with aluminum on approximately half of a glass bead surface area.

17. **(Original)** The method of claim 15, wherein the retroreflective beads are fully aluminum coated glass beads, the method further comprising etching aluminum from exposed surfaces of the retroreflective beads.

Application No.: 09/934031

Case No.: 56091US002

18. **(Original)** The method of claim 15, wherein applying heat and pressure comprises laminating the retroreflective beads onto the non-adhesive side of the pressure-sensitive adhesive tape.
19. **(Original)** A method comprising:
covering a first side of a foam backing with retroreflective beads; and
applying heat and pressure to melt the retroreflective beads into the first side of the foam backing.
20. **(Original)** The method of claim 19, wherein the retroreflective beads comprise glass beads coated with aluminum, wherein each glass bead is coated with aluminum on approximately half of a glass bead surface area.
21. **(Original)** The method of claim 19, wherein the retroreflective beads are fully aluminum coated glass beads, the method further comprising etching aluminum from exposed surfaces of the retroreflective beads.
22. **(Original)** The method of claim 19, wherein applying heat and pressure comprises laminating the retroreflective beads into the first side of the foam backing.
23. **(Previously presented)** An article comprising:
a foam backing including first and second sides;
a pressure-sensitive adhesive material covering the first side; and
a layer of retroreflective beads that are partially embedded in the second side, wherein the retroreflective beads comprise a coating comprising aluminum.
24. **(Previously presented)** The article of claim 23, wherein the article is made by the process of:
coating the first side of the foam backing with the pressure-sensitive adhesive material;

Application No.: 09/934031

Case No.: 56091US002

covering the second side of the foam backing with retroreflective beads; and
applying heat and pressure to partially embed the retroreflective beads in the second side
of the foam backing.

25. **(Original)** The article of claim 24, wherein applying heat and pressure comprises
laminating the retroreflective beads onto the second side of the foam backing.

26. **(Original)** The article of claim 23, wherein the layer of retroreflective beads exhibits
an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective
brightness after being subjected to a number of abrasion cycles, wherein the final reflective
brightness is greater than seventy percent of the initial reflective brightness when the number of
abrasion cycles is approximately 750.

27. **(Original)** The article of claim 23, wherein the layer of retroreflective beads exhibits
an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective
brightness after being subjected to a number of abrasion cycles, wherein the final reflective
brightness is greater than ninety percent of the initial reflective brightness when the number of
abrasion cycles is approximately 750.

28. **(Original)** The article of claim 23, wherein the layer of retroreflective beads exhibits
an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective
brightness after being subjected to a number of abrasion cycles, wherein the final reflective
brightness is greater than ninety percent of the initial reflective brightness when the number of
abrasion cycles is greater than 5000.

29. **(Cancelled)**

30. **(Original)** The article of claim 23, wherein the foam backing comprises a closed-cell
cross-linked foam.

Application No.: 09/934031

Case No.: 56091US002

31. **(Currently Amended)** An article comprising:
a medical tape ~~capable of being comfortably adhered to human skin, the medical tape~~
including comprising an adhesive side and a non-adhesive side, wherein the adhesive side is
coated with a pressure-sensitive adhesive; and
a layer of retroreflective beads that are partially embedded in the non-adhesive side of the
medical tape, wherein the retroreflective beads comprise a coating comprising aluminum,
wherein the layer of retroreflective beads exhibits an initial reflective brightness prior to being
subjected to abrasion cycles and a final reflective brightness after being subjected to a number of
abrasion cycles, wherein the final reflective brightness is greater than seventy percent of the
initial reflective brightness when the number of abrasion cycles is approximately 750.
32. **(Original)** The article of claim 31, wherein the medical tape includes a foam backing.
33. **(Original)** The article claim 31, wherein the final reflective brightness is greater than
ninety percent of the initial reflective brightness when the number of abrasion cycles is greater
than 5000.
- 34-35. **(Cancelled)**
36. **(Previously presented)** An article comprising:
a foam backing including first and second sides;
a pressure-sensitive adhesive material covering the first side; and
a layer of retroreflective beads that are partially embedded in the second side, wherein the
layer of retroreflective beads is substantially held in place in the first side of the foam backing
without the use of an adhesive or a resin.
37. **(Currently Amended)** An article comprising:

Application No.: 09/934031

Case No.: 56091US002

a medical tape ~~capable of being comfortably adhered to human skin, the medical tape including comprising~~ an adhesive side and a non-adhesive side, wherein the adhesive side is coated with a pressure-sensitive adhesive; and

a layer of retroreflective beads that are partially embedded in the non-adhesive side of the medical tape, wherein the layer of retroreflective beads exhibits an initial reflective brightness prior to being subjected to abrasion cycles and a final reflective brightness after being subjected to a number of abrasion cycles, wherein the final reflective brightness is greater than seventy percent of the initial reflective brightness when the number of abrasion cycles is approximately 750, and further wherein the layer of retroreflective beads is substantially held in place on the non-adhesive side of the medical tape without the use of an adhesive or resin.

38. (Previously Presented) A method of using a pressure-sensitive adhesive tape, comprising:

covering a non-adhesive side of the pressure-sensitive adhesive tape with retroreflective beads;

applying heat and pressure to melt the retroreflective beads into the non-adhesive side of the pressure-sensitive adhesive tape; and

removably attaching the pressure-sensitive adhesive tape to human skin or clothing.

39. (Previously Presented) The method of claim 38, wherein the retroreflective beads comprise glass beads coated with aluminum, wherein each glass bead is coated with aluminum on approximately half of a glass bead surface area.

40. (Previously Presented) The method of claim 38, wherein the retroreflective beads are fully aluminum coated glass beads, the method further comprising etching aluminum from exposed surfaces of the retroreflective beads.

Application No.: 09/934031

Case No.: 56091US002

41. **(Previously Presented)** The method of claim 38, wherein applying heat and pressure comprises laminating the retroreflective beads onto the non-adhesive side of the pressure-sensitive adhesive tape.
